

beyond SSL and ONLYOFFICE – Future of Remote Work

beyond SSL has decided to partner with ONLYOFFICE.

„Our constantly growing network of trusted partners enables us to establish the secure and powerful office suites „Docs“ and „Workspace“ in companies and public institutions worldwide. That’s why we’re happy about the distribution agreement and a good, successful cooperation with beyond SSL.“
Galina Goduhina, Sales Director of ONLYOFFICE

beyond SSL stands for secure mobile work and data sovereignty at all times. „Especially the end devices are a big problem in the remote work world. Be it as a security risk or the lack of compatibility of the necessary client software.“ says Siegfried Plommer, MD of beyond SSL.

Therefore, when choosing the office solution, special attention was paid to data protection and web capability. „If no software installation is required on end devices, I have at least eliminated the compatibility problem. If I can also control the data flow, then compliance with security standards becomes much easier.“ continues Siegfried Plommer. Not only the technology and the range of functions were decisive for the cooperation with ONLYOFFICE, but also the significantly more economical price model compared to many market competitors.

ONLYOFFICE offers a powerful office suite - ONLYOFFICE Docs - with online editors for text documents, spreadsheets, presentations and forms compatible with OOXML, ODF and other popular file formats. In addition, ONLYOFFICE provides Workspace - a business collaboration platform with multiple productivity tools including document and project management, email, CRM, calendar, chat and many more. ONLYOFFICE can be deployed on any platform and on any device. A single engine for online, mobile and desktop versions guarantees a seamless transition from offline to online and vice versa.

„All of our solutions are based on the motto of data security, are compatible with each other and should provide mutual added value.“ Michael Hochgesang, MD beyond SSL For example, FileCloud, the hyper-secure content collaboration platform in the beyond SSL range, offers seamless integration for ONLYOFFICE.
